- "How does the pitcher's throwing speed change the batting success?"

Encourage the student to think about what they want to discover and why it's important.

- Conduct Background Research

Help the student learn basic facts about the chosen topic. Use age-appropriate books, videos, or websites to understand the science behind baseball. For example:

- How does force impact the speed of a baseball?
- What is the optimal angle for hitting a baseball?

- Formulate a Hypothesis

Based on research, encourage the child to make an educated guess. For example:

- "I think a heavier baseball will go farther when hit with the same force."
- "Hitting the ball at a 45-degree angle will make it go the farthest."

- Plan the Experiment

Determine what materials are needed, what variables will be tested, and how data will be collected.

Materials might include:

- Various baseballs or balls of different sizes
- A bat or similar hitting tool
- Measuring tape or ruler
- A protractor to measure angles

- Dependent variable: What you measure (e.g., distance traveled)
- Control variables: Things kept the same (e.g., hitting force, weather conditions)

- Conduct the Experiment

Guide the student to perform multiple trials to ensure accurate results. For example:

- Hit the baseball at different angles (e.g., 30°, 45°, 60°)
- Record how far the ball travels each time
- Repeat each test at least three times for consistency

Ensure safety measures are in place, especially when swinging bats or handling balls.

- Record and Analyze Data

Create charts or graphs to visualize findings. For example:

- A bar graph comparing the distances for each angle
- A line graph showing the relationship between ball size and distance

Help the student interpret the data to see if it supports their hypothesis.

- Draw Conclusions

Discuss what was learned from the experiment. Did the results match the prediction? Why or why not? Encourage critical thinking and reflection.

- Prepare the Display Board

Help the student organize their project into sections:

- Title
- Question or Problem Statement
- Hypothesis
- Materials
- Procedure
- Data and Results (charts, graphs)
